

# OPL-2724 Quick Start

## About Your OPL-2724:

The OPL-2724 scanner is a breakthrough in affordable wireless laser scanning. The scanner has the scanning performance of more expensive laser scanners, the convenience of hand-held portability, and the advantage of Bluetooth® wireless technology.

## Pairing Overview:

Depending on the type of device to be connected to the OPL-2724, the steps to connect using Bluetooth® could be slightly different. Follow the steps below to pair your scanner to your device.

### [Step 1] – Discovery Mode

To pair the scanner with device, place the scanner into *Discovery* mode. Press and hold the scan button for approximately 3 seconds until the scanner beeps or the blue LED starts flashing.

### [Step 2] – Add Scanner to Bluetooth Manager

To add the scanner to your Bluetooth® device, open the Bluetooth® Manager or Bluetooth® Option on the device. Select *Add Device* or *Discover Device* depending on the type of device you are using. Select the scanner ID "**OPL-2724\_IP**" from the list of nearby devices before continuing.

When prompted to enter a *Passkey*, enter the value "**0000**".

### [Step 3] – Loading Scanner Driver

For details on loading scanner drivers refer to the scanner's user manual or the driver's user manual.

## Un-pairing Scanner:

The OPL-2724\_IP Bluetooth® scanner stores the previously paired device information internally. If the scanner needs to be paired to another device, scan the un-pair barcode below to clear the previously paired device from the scanner's flash memory.
